ABOUT ME

I have spent much time in self-learning, developing small projects for students, and building my technical skills independently. However, I recognized the importance of collaboration, which led me to pursue a degree in Computer Programming at Istanbul Aydin University. My primary focus is gaining team experience, as I can learn much faster through self-study than traditional academic methods.

LANGUAGES

- English
- Arabic

EDUCATION

2023 - Now
Istanbul Aydin University
Computer programming

REASONS TO CHOOSE ME

- I already have a strong grasp of most topics taught in my department, which allows me more free time to dedicate to working with a team.
- Almost all of my knowledge came from self-learning. This shows my ability to effectively teach myself, making me confident in acquiring any skills necessary for team projects.
- I can easily obtain recommendation letters from all of my department instructors, as they consider my skills to be significantly more advanced than the average student.

SKILLS WITH EXAMPLES

Python programming, including building bots
https://github.com/Ameer5CT/club_safe_box
https://github.com/Ameer5CT/web_tele_register
https://github.com/Ameer5CT/python_telegram_console

Web development (HTML/CSS/JavaScript)
https://github.com/Ameer5CT/web_tele_register
https://iau.a5ct.com/blockchain

REASONS TO CONSIDER

- I don't speak Turkish, and when it comes to human languages, I'm not as quick a learner as I am with programming languages.
- I haven't worked in a team before. While I believe I can adapt quickly, I currently lack the experience to prove it.
- I'm not particularly skilled at documenting or creating videos about projects, although I have documented a few on my GitHub. It's not something I enjoy doing.
